Dear Bending Spoons Team,

I am excited to apply for the Data Scientist role at Bending Spoons. Your model of acquiring and deeply transforming digital products, with AI woven into every layer of how teams operate, is exactly the kind of environment where I want to build. My background spans the full data stack, from engineering pipelines and designing reporting frameworks to building machine learning models and integrating LLM-powered tooling, and I am eager to bring that range to a product-driven team working at this scale.

My experience aligns closely with what this role demands. At the Defense Health Agency, I engineered ETL pipelines processing over 100 million records from four source systems and built dashboards tracking quality metrics across 9.5 million beneficiaries, improving data quality by 60% while keeping everything HIPAA-compliant. At Day Pitney, I migrated legacy SSIS workflows to modern Azure pipelines and built automated solutions that reduced manual processing time by 75% across more than 20 finance workflows. On the modeling side, I have built predictive relevance scoring systems, customer segmentation tools using K-means++ with RFM analysis, and end-to-end RAG pipelines combining vector search with LLM synthesis, all projects that reflect the kind of scalable, cross-functional data products Bending Spoons is looking for.

I thrive in small, high-ownership environments where the expectation is to move fast, think from first principles, and take full responsibility for outcomes. I am based in Utrecht and available for remote work across Europe with no sponsorship required. I would welcome the chance to work through your selection process and demonstrate what I can contribute.

Sincerely,

Zac Stryker
